

Polyurethane Coating

Application: Tank Lining

Location: New South Wales

Material: Polyurethane protective coating (CoBond Protect)

Situation:

In order to protect the tank from corroding, our customer required a new solution that would greatly protect the steel tank from the harsh nature of the material contained in the tank. Additionally the solution needed to be able to expand and contract with the changing temperatures.

Result:

We developed a high performance polyurethane coating that could be sprayed onto the tank surface. This coating provided full encapsulation of steel work and has proven its durability through the changing temperatures without and damage to the surface coating.
